

Coastal[®] Premium Rock Drill Oil

COASTAL PREMIUM ROCK DRILL OILS - are blended from highly refined base oils and special additives which produce an outstanding lubricant for air powered equipment. The naturally high viscosity index provides optimum lubrication for both low start-up temperatures and high operational temperatures. Extreme pressure additives prevent wear and withstand the high loads commonly encountered in rock drills, jack hammers, pavement breakers, stoppers, drifters and down hole drills both in the construction and mining industries and other pneumatic equipment.

COASTAL PREMIUM ROCK DRILL OILS atomize readily to insure lubricant distribution and rapid “wetting” of all parts of the equipment.

COASTAL PREMIUM ROCK DRILL OILS contain tackiness agents that permit them to tenaciously adhere to cylinder walls and other lubricated parts. They are fortified with extreme pressure additives that protect rock drills against wear caused by shock loads.

Benefits

- High film strength and extreme pressure properties
- Exceptional protection against rust and corrosion
- Excellent anti-foam capabilities
- Excellent adhesion
